

Project Brief

Project Explanation

Stockle is an educational paper trading platform where users can make trades with a “paper” balance using real market data. Artificial Intelligence is used to analyse user trade data to provide feedback and strategies, educating the user on how to trade effectively/profitably. Stockle also includes practice challenges where a stock at a random time in the past is given to the user with a set starting balance so they can test practical

knowledge/strategies to analyse if the stock price will go up or down. The trades are based in the US market through the use of a finance API (Alpaca or Alpha Vantage) to return stock data from previous years up until the day before (yesterday’s market).

Project Details

Ability to:

- View / Buy / Sell / Trade stocks
- NOT use real currencies, nor does it interact with real stocks or crypto
- Make an account to save data
- Get an AI summary of user trading data
- Realistic market trading hours
- Get access to historical market data
- Have a profile page
- Edit my profile information
- Edit my contact information

Want the Ability to:

- Play interactive stock market puzzles
- Play historical market trading games
- View a Leaderboard system
- Communicate with Friends
- Communicate in Public Forums
- Create groups for Private Forums
- Have dark mode and light mode
- Ability to view news stories
- Have a AI Chatbot that i can communicate with
